

Mobile Production Kit

Broadcast quality productions made accessible...

- Virtual events and webinars
- Recording in-person and online meetings in high definition quality
 - Incorporate into existing video conference solutions
 - Training videos / educational broadcasts or short films
 - Create engaging marketing materials
- High-quality post-production workflow for uploading to Video On Demand platforms.
(YouTube, Vimeo, etc.)

Mobility + Efficiency

No messy and troublesome cabling

Without this product, it can be difficult and time consuming to unpack and connect each piece of equipment and their various power and signal cables with their associated adapters.

Often, finding and troubleshooting each piece of gear and then testing the system to make sure it all works takes up valuable production time.

Having a fully built and tested kit that can be easily setup to begin operating as quickly as possible is most ideal when every minute counts.

Easy to use

Designed by experienced production specialists to be easy to learn and operable by almost anyone.

Pre-programmed scene settings and levels allow you to hit the ground running when time is of the essence.

Other experienced technicians are still able to self modify and tune settings to their personal liking.

Patchbay

A simplified audio and video cable connector plate allows for quick access to frequently used device ports without any confusion of what gets plugged in and where.

Labeling

All devices, ports, and cables are clearly labeled to be logically systematic and manageable by any operator.

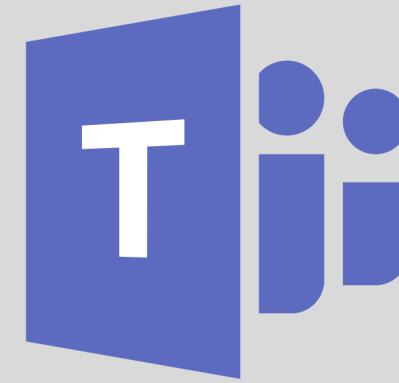

Connectors

Professional locking connectors like XLR and BNC are more reliable and harder to accidentally disconnect in the middle of a live broadcast and allow for longer cable distances.

Video Rack

- **Connect up to 8 cameras or sources**
The standard kit will support 4 SDI cameras and 4 HDMI sources by default but can be customized.
- **Expansive recording options**
Simultaneously record inputs and primary Program Output.
- **Flexible video outputs**
HDMI out for transport to other monitors or for use in video conferencing software as a virtual web camera such as in **Zoom** or **Teams**.
- **Network control**
Operators can control the video switcher from other network connected devices including wirelessly via smartphone or tablet.
- **Redundant data storage**
With compatible cameras, record simultaneously on camera and SSD to be certain you got the shot.

Audio Rack

- **Digital mixing board**
Recalling settings and levels for a particular type of production is as easy as pressing 1 button.
- **Up to 7 programmable event scenes**
Presets for routing, EQ, and audio levels for different voice types can be easily recalled for intuitive control.
- **16 audio inputs**
Mix and record up to 16 channels (microphones, PCs, background music, etc.)
Standard kit comes with 2 wireless lavalier mics and 2x wireless handheld mics.
- **12 output channels**
Send different mixes to different destinations. For example, a main stereo mix for a web stream, another to the PA system, and another to a video conference caller somewhere else in the world.
Standard kit comes with 2x wireless in-ear headsets for listening requirements on stage.

VEGA

Lighting Kit

A crucial but often overlooked element to video production is lighting. In addition to the ambient light in a room, subjects on camera require additional lighting to separate them from the background and to create a professional look.

Our standard kit includes 3x 180 watt fully modular professional LED production lights with barn doors and light domes to shape your light for the best look.

- **Remote and network controllable with smartphone or tablet.**
- **Included gel holders can be used to tune lighting color.**
- **Lightweight and cost effective compared to typical production stage lighting fixtures.**

VEGA

Organization & Storage

Store all accessories and necessary components that come with this kit in an easy to access drawer.

Carefully planned product compartmentalization keeps your equipment well organized and stored safely when not in use.

Included product checklists prevent accidental loss.

Mobility

- **Stackable**

Interlocking bars allow for Mobile Production Kit racks to be easily and securely stacked for compact usage and stowing.

- **Durable**

Made from rotational molded polyurethane for its cost effective strength & impact resistance.

Cases are water resistant with rubber gasket seals in the front and rear lids to keep out moisture.

- **Mobile**

10 cm locking wheels for convenient transportation.

VEGA

Training and Support

Your Mobile Production Kit comes included with one-on-one instructional time for your event team with our experienced production engineers.

Should you not have any in-house staff to support your organizations evolving production needs, we also offer support staff on a per event or even contract basis to suit your unique requirements.

Our production team can also assist with any pre-production and post-production requirements you may have.
